

Bromma Spreader Monitoring System Data Security

Bromma Spreader Monitoring System collects data from the spreaders diagnostics system. The encrypted data is transferred via an IoT gateway communicating over a secure private tunnel.

The data is stored in a secure private cloud instance, where it can only be accessed by authorized personnel and applications.

Bromma's Spreader Monitoring System application is running in a secure private cloud instance. Application requests are isolated from the public Internet through load balancers and all data traffic is encrypted. Access management is implemented to ensure only authenticated users can access data.
